

Join Darrel Lampley of FISHER/UNITECH for an overview of SolidWorks 3D CAD software. Learn how SolidWorks can help you maximize your productivity and focus on innovation to create products better, faster and more cost-effectively. Darrel will focus on the 20th release of the software, SolidWorks 2012, which features over 200 new customer-driven enhancements. The most significant improvements have been made in the areas of assembly and drawing capabilities, built-in simulation, design costing, routing, image and animation creation and product data management.

These new capabilities will help automate the design functions SolidWorks customers use most often, improve performance and quality for a more streamlined workflow, fundamentally change product development processes for faster designs, and extend support for collaboration and team connectivity for creativity and efficiency.
