

Danny Davis

I started with Widia at an early age in the year 1983. Began as a machine operator and quickly became responsible for producing the Custom Hanita endmills. A few years later I was Manufacturing Team Lead over all ground in flute endmills. In 1996 I moved to the Engineering department and was responsible for drawings and CNC programs of all the standard and custom endmills produced in the Asheboro, NC facility. In 2007 was made Manager of Custom Solution Engineering for North America. This consisted of creating designs, costing, and programming for Custom endmills sold in North America. This also included support for manufacturing to produce the customs. Then in 2015 I became Staff Engineer responsible for projects. This basically covered working on major projects internally and for customers for solid endmills. Over the past 10-12 years, I have been able to file for 15 patents while working for Widia.
